Backend-focused Software Developer with hands-on expertise in Node.js, TypeScript, RESTful API architecture, and database design (PostgreSQL, MongoDB, Redis). Experienced in leveraging Spec-Driven Development (SDD) and AI workflows to build scalable, tested, and reliable software. Complementary frontend experience with React and Astro to ensure seamless API integration and end-to-end delivery.

TECHNICAL SKILLS

- Backend: Node.js, TypeScript, Express, Prisma ORM, Mongoose, APIs REST.
- Database: PostgreSQL, MongoDB, Redis.
- Frontend: React, Astro, Tailwind CSS, EJS.
- Tools, Testing & DevOps: Linux, Docker, Git, GitHub, Jest, Vitest, Third-party API Integrations (TMDB, Clerk, Hugging Face, OpenRouter).

FEATURED PROJECTS

API PeliValoración | *Node.js, TypeScript, MongoDB, Redis* | Jan 2026 - Present

- Architected a modular RESTful API enabling users to review, score, and manage media content in real time.
- Integrated TMDB API for dynamic catalog synchronization and data retrieval.
- Implemented Redis caching layers, achieving a 90% reduction in response latency on subsequent read queries.
- Designed scalable schema structures in MongoDB with Mongoose for efficient handling of relational user and review datasets.

Recipe Costing & Inventory Engine | *Node.js, TypeScript, PostgreSQL, Prisma, Jest* | Dec 2025 - Present

- Developed a backend computation service to automate cost analysis and ingredient scaling for commercial culinary recipes.
- Modeled relational database schemas in PostgreSQL, leveraging Prisma ORM for type-safe queries and optimized transactions.
- Authored automated unit test suites using Jest to guarantee core business logic reliability and zero-regression deployments.

Aplicación Pro/Cont (AI-Powered) | *Astro, React, MongoDB, Hugging Face, Clerk* | Mayo 2025

- Engineered an interactive decision-support application with real-time pros/cons matrix evaluation.
- Integrated OpenRouter LLM endpoints to deliver automated contextual suggestions and user recommendations.
- Implemented OAuth 2.0 authentication flows using Clerk (GitHub & Google SSO) with secure session management.
- Optimized web performance via Astro Islands architecture, combining server-rendered static delivery with isolated interactive React components.

EDUCATION & CERTIFICATIONS

EF SET Certificate in Reading & Listening | *C1 Advanced* | 2026

Full Stack Open Certification | University of Helsinki | 2024

- Deep dive into Node.js, Express, TypeScript, React, MongoDB, and automated testing.

Computer Engineering (Coursework) | *Universidad Nacional Experimental del Táchira*

- Core coursework in Data Structures, Object-Oriented Programming, and Algorithmic Logic.

Languages: Spanish: Native, English: Professional Working Proficiency (B2/C1 input Comprehension, active speaking practice)
